নং-৩৬.০৮.০০০০.২০০.১৬.০০১.২২.২৬৮৯ তারিখঃ ২৩/১০/২০২৫ খ্রি.

বিষয়ঃ দাখিলকৃত পেটেন্ট আবেদনসমূহ ওয়েবসাইটে প্রকাশ।

বাংলাদেশ পেটেন্ট আইন, ২০২৩ এর ধারা ১৭ অনুযায়ী ডিপিডিটিতে ২০২৩ সালে দাখিলকৃত পেটেন্ট আবেদন নং ২২৭, ২২৯-২৩৩, ২৩৫-২৩৬, ২৩৮-২৩৯, ২৪১-২৪৫, ২৪৭-২৭৮, ২৮১-২৯৪, ২৯৯-৩১১, ৩১৩, ৩১৫-৩২০ এবং ২০২৪ সালে দাখিলকৃত পেটেন্ট আবেদন নং ১, ৩, ৫-১৪, ১৬-২২, ২৫-২৬, ২৯-৩১, ৩৩-৩৮, ৪০-৪৫, ৪৮-৬১, ৬৩-৭৫, ৭৭, ৭৯-৮২, ৮৫-৮৭, ৮৯-৯০ মোট ১৫৪ (একশত চুয়ান্ন) টি আবেদন নিম্নবর্ণিত তথ্যাদি সহ অধিদপ্তরের ওয়েবসাইটে (www.dpdt.gov.bd) প্রকাশ করা হল।

(ক) উদ্ভাবনের শিরোনাম;
(খ) পেটেন্ট আবেদনকারী ও উদ্ভাবকের নাম;
(গ) আবেদন দাখিলের তারিখ ও নম্বর;
(ঘ) অগ্রাধিকার নম্বর ও তারিখ, যদি থাকে;
(ঙ) পেটেন্ট এর শ্রেণিবিন্যাস;
(চ) উদ্ভাবনের মূল উপাদান চিত্রায়িত করে এইরূপ অংকন, যদি থাকে;
(ছ) বিষয়বস্তুর সার-সংক্ষেপ।

সংযুক্তিঃ ১৫৪ (একশত চুয়ান্ন) পাতা।

(54) Invention Title: iGBM Machine: Implement for Green Brick Manufacturing

(57) Abstract
The iGBM machine that is used for green brick making, brick material forced into a mould to shape a brick. Then yield on a tray, material handling apparatus keep the bricks either stack in vertical columns or arrayed in horizontal fashion. The concern machine mould comprises a lower body that has a cavity with mould frame, longitudinal and transverse plates furnished and tightly attached to the lower part of the mould. These plates are connected in an insertion mode and tightened with the mould frame. The steel plates are arranged onto a lower body part where the two surfaces of longitudinal and transverse plates joined in a pattern of being perpendicular, and tightly attached. This whole system is put onto a load bearing unit where chain pinion system acting in the lower frame of the machine.

(51) INT. CL. : A61F 13/494

(54) Invention Title: AN UNDERGARMENT

(57) Abstract

An undergarment is provided. The undergarment includes a first fabric and a second fabric adapted to cover a front pelvic and a rear pelvic region, respectively, of a user. The undergarment includes a third fabric attached along a first and a second periphery of each of the first and the second fabric, to cover a crotch region of the user. The third fabric includes a first layer, a second layer, and a third layer. The first layer is positioned in contact with a crotch region of the user and is adapted to receive body fluid. The second layer is attached to the first layer and is adapted to receive the body fluid from the first layer and temporarily retain the body fluid therein. The third layer, having at least two sub-layers, is attached to the second layer and is adapted to prevent passage of the body fluid towards the third fabric, and thereby prevent leakage of the body fluid and soiling of the undergarment.

(54) Invention Title: SMART POLICY RULE UPDATE

(57) Abstract
The embodiments herein relate to smart policy rule update. In some embodiments, there proposes a method (500) performed by a second network function (102) implementing a Session Management Function (SMF). The method (500) may comprise the step of receiving (S501), from a first network function (101) implementing an Access and Mobility Management Function (AMF), a first message including a first parameter indicating a first retry-after time. The first retry-after time may indicate the second network function (102) to stop sending a message for a User Equipment (UE) (106) before the first retry-after time is timeout. The method (500) may further comprise the step of transmitting (S502) based on the first message, to a third network function (103) implementing a Policy Control Function (PCF), a second message including a second parameter indicating a second retry-after time during which the UE (106) is considered unreachable. The embodiments may reduce the signal exchange between the PCF and the SMF when the UE is not reachable or the UE is busy on other procedures.

(54) Invention Title: SEWING UNIT, SEWING MACHINE, AND METHOD FOR MANUFACTURING SLIDE FASTENER-ATTACHED PRODUCT

(57) Abstract

A sewing unit (30, 30a) according to the invention is a sewing unit (30, 30a) attached to a sewing machine (10) sewing a fastener stringer (1) onto a fastener attached member (5), having a motion detecting portion (40) detecting lifting and lowering motion of a sewing machine needle (15), a stringer feeding portion (50, 80) performing a feeding operation of the fastener stringer (1), and a position adjusting portion (60) adjusting a position of the stringer feeding portion (50, 80), wherein the stringer feeding portion (50, 80) has at least one feeding gear (51, 81) comprising a plurality of teeth and a rotation control portion (52, 82) intermittently rotating the feeding gear (51, 81) in response to a signal output from the motion detecting portion (40), and the sewing unit (30, 30a) has a structure that can be attached to and detached from an existing sewing machine (10). Thereby, the fastener stringer (1) can be sewn onto the fastener attached member (5) so that a sewing portion of a sewing thread can be formed at a position contacting fastener elements (3).

(54) Invention Title: METHODS AND APPARATUSES FOR PROVIDING A CAPABILITY RESTRICTED INDICATION FROM MULTI-UNIVERSAL SUBSCRIBER IDENTITY MODULE USER EQUIPMENT TO NETWORK

(57) Abstract

Embodiments described herein relate to methods and apparatuses for indicating capability restricted information. A method in a user equipment comprises establishing or resuming a second service with a second network according to a second subscription; and indicating to the second network that the user equipment has different capabilities for the second service than capabilities previously indicated to a radio access technology node.

(54) Invention Title: SYSTEMS AND METHODS FOR OPERATING AN OVERHEAD ELECTRICAL LINE

(57) Abstract

Systems and methods for the determination of a health index associated with an overhead electrical cable having a fiber-reinforced composite strength member and an electrical conductor surrounding the fiber-reinforced composite strength member. Operational data is collected from the electrical cable during operation of the cable and that data is utilized to update the health index over time. The updated health index may be utilized to estimate the remaining useful lifetime of the overhead electrical cable on a continuous basis.

(54) Invention Title: METHOD FOR REMOVING CHLORINE IN ZINC HYDROMETALLURGY

(57) Abstract

The present disclosure provides a method for removing chlorine from a process solution in zinc hydrometallurgy, the method comprising: a step for preparing the process solution from a leaching process of leaching a zinc calcine; a step for introducing the process solution to a reactor and introducing a lead concentrate into the reactor while blowing-in oxygen; a step for solid-liquid separating of a slurry in a filtration tank, the slurry being produced in the reactor; and a step for post-processing a filtrate and a lead concentrate residue separated in the step for solid-liquid separating, wherein chlorine ions in the process solution and silver contained in the lead concentrate react with each other in the reactor to precipitate a silver chloride.

(54) Invention Title: METHOD FOR REMOVING HALIDE FROM WAELZ OXIDE

(57) Abstract

The present disclosure relates to a method for removing halide from halide-containing Waelz oxide. According to the method, it is possible to effectively remove halide contained in Waelz oxide, especially insoluble fluoride such as CaF2, which are difficult to remove under atmospheric pressure conditions and present as insoluble substances. Accordingly, in the process of recovering valuable metals, an additional process for adjusting the concentration of fluorine or chlorine present in the electrolyte can be omitted, and costs can be reduced.

(54) Invention Title: NextGen Mosquito and Insect Trap - Moshar Machine

(57) Abstract

The present invention is a mosquito trap utilizing the photo catalysis method. The trap comprises a housing, a light source, and a photocatalytic material coated on a surface within the housing. The photocatalytic material is activated by the light source and generates reactive oxygen species, which attracts mosquitoes and other insects. Once attracted, the mosquitoes are trapped in the housing, and the reactive oxygen species eliminate them. The trap is eco-friendly, as it does not use any harmful chemicals or emit any harmful gases. Additionally, the trap is efficient, cost-effective, and can be used both indoors and outdoors. The invention offers a sustainable solution to the problem of mosquito control and can be used in residential, commercial, industrial and public spaces.

(54) Invention Title: IoT Management System to Access Real-Time Data and Enable Data Driven Switching Decision of LP Gas Manifolds

(57) Abstract
An IoT gas manifold management system that includes an IoT monitoring and switching device, LPG manifolds, LPG commercial cylinders, RFID and Barcode base data storage associated with LPG commercial cylinders, cloud IoT server and web based monitoring dashboard. The IoT device ensures uninterrupted supply of LPG through efficient switching decisions between LPG manifolds by sensing pressure data in its inlets and comparing it with trained data sets from cloud server. The IoT cloud server also keeps LPG commercial cylinders data and switching information to strategically manage the supply chain. The web based dashboard displays real-time tracking data of uses to users and associated LPG operators.

(54) Invention Title: COMPUTING DEVICE

(57) Abstract

An application specific integrated circuit (ASIC) package for use in an electrical or electronic device is disclosed, the ASIC package comprising a plurality of functional units and a plurality of terminals. Each functional unit is configured with control logic operable to provide a discrete monitoring and/or control function associated with an aspect of operation of the electrical or electronic device. Each terminal comprises a plurality of input and/or output terminals, each input and/or output terminal being connected to at least one of the functional units. An operating status of each of the functional units is independently configurable into one of an enabled and non-enabled operational state, and the ASIC package is configured to be set into a target functional configuration selected from a plurality of different functional configurations. Each of the plurality of functional configurations comprises a different combination of operating states associated with respective ones of the plurality of functional units. In this way, the ASIC package provides a degree of customisability of supported functions, enabling the same ‘master’ ASIC package (e.g. the as-fabricated ASIC package) to be modified after manufacture to tailor the supported function set to a specific one of a plurality of devices.

(54) Invention Title: COMPUTING DEVICE.

(57) Abstract

An application specific integrated circuit (ASIC) package for use in an electrical or electronic device is disclosed. The ASIC package comprises a plurality of functional units, a plurality of terminals, and a plurality of switches. The plurality of switches are connected in series along a portion of an electrical current path within the ASIC package, and at least one of the functional units comprises switching control logic configured to independently switch each of the switches between an open-circuit state and a closed-circuit state. Additionally, at least one of the functional units is configured to provide a monitoring function comprising determining occurrence of a fault condition associated with operation of the electrical or electronic device, and to transmit a fault trigger signal to the switching control logic in response to a fault condition being determined. The switching control logic is configured to trigger an open-circuit state of at least one of the plurality of switches in response to receiving the fault trigger signal. This can provide enhanced safety by enabling the isolation of the ASIC package from power sources (e.g. a charger and / or a battery) and / or a load (e.g. a heater) if a fault is determined by a safety-related functional unit of the ASIC package.

(54) Invention Title: COMPUTING DEVICE

(57) Abstract

An application specific integrated circuit (ASIC) package for use in an electrical or electronic device is disclosed, the ASIC package comprising a plurality of functional units and a plurality of terminals. Each functional unit is configured with control logic operable to provide a discrete monitoring and/or control function associated with an aspect of operation of the electrical or electronic device. Each terminal comprises a plurality of input and/or output terminals, each input and/or output terminal being connected to at least one of the functional units. An operating status of each of the functional units is independently configurable into one of an enabled and non-enabled operational state, and the ASIC package is configured to be set into a target functional configuration selected from a plurality of different functional configurations. Each of the plurality of functional configurations comprises a different combination of operating states associated with respective ones of the plurality of functional units. In this way, the ASIC package provides a degree of customisability of supported functions, enabling the same ‘master’ ASIC package (e.g. the as-fabricated ASIC package) to be modified after manufacture to tailor the supported function set to a specific one of a plurality of devices.

(54) Invention Title: FATTY ACID SOAP BARS COMPRISING POTASSIUM SOAP
(57) Abstract The present invention relates to predominantly soap bars made from oil or oils of defined iodine value.Unexpectedly, it has been found that, when defined amounts of potassium soap are used, bars made from oils falling within a high IV range have excellent extrusion rates (as defined by falling within defined hardness values) without exhibiting the drop in hardness associated with high IV values. The lather of the bars was also seen to be good with low levels of nut oilsincorporated in the soap bars.This is a unique and unexpected.

(51) INT. CL. : A23K 10/37

(54) Invention Title: Bran Food's Power enhances well being of noncommunicable diseases and immune boosting for human.

(57) Abstract
The present patent application relates to innovations in the field of nutrition and health, specifically addressing the power of bran-enriched foods to enhance overall well-being, reduces the risk of noncommunicable diseases (NCDs), and boosts the human immune system. Bran, derived from various grains such as rice, wheat, maize, oats, lentils, chickpeas and others, is known for its rich nutritional composition, including dietary fiber, vitamins, minerals, and bioactive compounds. This patent discloses a method for preparing food products that incorporate bran in a manner that optimizes its beneficial effects on health. The innovative approach to incorporating bran into common food products and promoting its consumption as a means to enhance health and well being is at the core of this patent application. By improving the accessibility and desirability of bran enriched foods, this invention aims to contribute significantly to the prevention of NCDs and the promotion of immune system support, thus enhancing the overall health of the human population.

(51) INT. CL. : C12N 15/10

(54) Invention Title: AN EFFICIENT PROCESS FOR THE PURIFICATION OF ALEURITIC ACID

(57) Abstract
This invention presents an enhanced one-step purification method for aleuritic acid extracted from lac resin. As a replacement for the traditional purification steps, sodium chlorite is used to rapidly remove impurities and colours. After extracting crude aleuritic acid, it undergoes treatment with a specific concentration of sodium chlorite solution at pH 4. This yields high-quality, white orthorhombic aleuritic acid crystals with over 99% purity and a minimum 29% yield. The purified aleuritic acid is characterised using FTIR, DSC, XRD, and purity is confirmed by HPLC. Aleuritic acid, sourced from plant waxes, serves diverse industrial applications, including coatings, adhesives, biodegradable polymers, cosmetics, drug delivery, food packaging, agriculture, and electronic materials, driving innovation in sustainable industries.

(54) Invention Title: PRODUCTS WITH SPHERICAL FILLER

(57) Abstract
The disclosure provides a method for preparing a composition configured for oral use. The method includes providing an aqueous solution of free base nicotine; an alkali metal salt of an organic acid; and combining the aqueous solution with the alkali metal salt of the organic acid to form an ion paired nicotine solution. The method further optionally includes providing a flavorant solution; optionally combining the flavorant solution and the ion paired nicotine solution to form an aqueous mixture; providing at least one filler; and contacting the at least one filler with the aqueous mixture to form the composition. At least a portion of the nicotine in the composition is associated with at least a portion of the alkali metal salt of the organic acid in the form of an ion pair between the nicotine and a conjugate base of the organic acid.

(54) Invention Title: METHOD FOR RECOVERING IRON AND VALUABLE METALS FROM ELECTRIC ARC FURNACE DUST

(57) Abstract

A method for recovering iron and valuable metals from electric arc furnace dust includes: an electric arc furnace dust treatment process of treating electric arc furnace dust to produce an intermediate product containing iron; an intermediate product treatment process of heating the intermediate product to a predetermined temperature range so that the intermediate product charged into a melting furnace is melted and reduced; and a recovery process of recovering metallic iron produced by reduction from the intermediate product and recovering valuable metals generated in the form of dust. The intermediate product treatment process includes a reducing agent charging process of charging a reducing agent containing carbon into the melting furnace to increase an amount of the metallic iron reduced from the intermediate product. The reducing agent is charged into the melting furnace at an equivalent ratio of 1.7:1 to 3.1:1 relative to iron oxide contained in the intermediate product.

(54) Invention Title: SECURITY FOR AI/ML MODEL STORAGE AND SHARING

(57) Abstract

Embodiments include methods for a consumer network function (NFc). Such methods include sending, to a network repository function (NRF), a first request for a first access token associated with a machine learning (ML) modelthat is produced, owned, and/or maintained by a producer NF (NFp). The first request includes an analytics identifier (ID) associated with the ML model, a vendor ID associated with the NFc, and an ID associated with the NFp. Such methods include receiving from the NRF a first response including the first access token and sending to the NFp a second request for the ML model. The second request includes the first access token, the analytics ID, and the vendor ID associated with the NFc. Such methods include receiving from the NFp a second response including a universal resource locator associated with a second NF of the communication network, from which the ML model can be obtained.

(51) INT. CL. : B21F 45/18

(54) Invention Title: FASTENER STRINGER FOR CONCEALED SLIDE FASTENER

(57) Abstract

A fastener stringer (11A, 11B) for a concealed slide fastener includes a pair of fastener tapes (20A, 20B) and a pair of fastener element rows (30A, 30B) each including a coil-shaped monofilament row (29A, 29B) and a core string (15). Each element (31) of each of the fastener element rows includes a meshing head portion (32), an upper leg portion (33), a lower leg portion (34), and a connecting portion (35), and in each element, by forming a bent portion (38) in the lower leg portion, a lower surface (37) of the lower leg portion is formed such that a first lower surface (37a) on a side of the connecting portion with respect to the bent portion is closer to a side of the upper leg portion with respect to a second lower surface (37b) on a side of the meshing head portion with respect to the bent portion.

(54) Invention Title: Special Electric Equipment and Method Suitable for Subway Rail Construction in Tunnel

(57) Abstract

The present invention discloses special electric equipment and method suitable for subway rail construction in a tunnel, and belongs to the technical field of transportation equipment. The special electric equipment includes a headstock, a front frame, a connecting frame, a rear frame, wheels, driving assemblies and a steering assembly, wherein the headstock is connected to the front frame; the front frame, the connecting frame and the rear frame are sequentially hinged; the driving assemblies are installed at the bottom end of the front frame and the bottom end of the rear frame; the steering assembly is installed at the bottom end of the connecting frame; and the plurality of wheels is installed at the bottom ends of the driving assemblies and the bottom end of the steering assembly, respectively. The equipment of the present invention is simple in structure, energy-saving and environment-friendly, and can complete the functions of track panel transportation, concrete pouring and rail material transportation in a narrow space.

(51) INT. CL. : E09B 9/36

(54) Invention Title: PLATED ARTICLE AND FASTENER STRINGER

(57) Abstract

Plated article includes a base member (83) including at least one base member metal element; and a plating layer (84) formed on the base member (83). The plating layer (84) includes first and second plating layers (81,82) formed in this order on the base member (83). Each of the first and second plating layers (81,82) includes at least a first metal element of plating layer that is a same metal element as the base member metal element and a second metal element of plating layer that is a different metal element than the base member metal element. Element ratio of the first metal element of plating layer continuously decreases as being away from the base member (83) across a total thickness of at least the first and second plating layers (81,82). Element ratio of the second metal element of plating layer continuously increases as being away from the base member (83) across the total thickness of at least the first and second plating layers (81,82). The second plating layer is visually distinguishable from the first plating layer (81) as a layer containing larger grains than grains of the first plating layer (81) in a first TEM (Transmission Electron Microscope) image.

(51) INT. CL. : F25D 23/02

(54) Invention Title: A CONTAINER

(57) Abstract
A container is disclosed. It comprises a base portion defining a storage compartment and including a cylindrical side wall, and a lid having a resiliently deformable cylindrical peripheral wall. The side and peripheral walls include respective cooperating elements that engage when the lid is placed on the base in a direction extending along a longitudinal axis of the cylindrical side and peripheral walls with the side wall of the base being at least partly received within the peripheral wall of the lid, to couple the lid to the base and close the storage compartment. The side and peripheral walls further comprise respective cam members that are spaced from each other in a radial direction from the longitudinal axis when the lid is coupled to the base. The cam member on the peripheral wall of the lid is movable in a radially inward direction towards the longitudinal axis in response to the resilient deformation of the peripheral wall of the lid so that the cam member on the peripheral wall of the lid radially aligns with the cam member on the side wall of the base and so that, upon relative rotation of the base and the lid when the peripheral wall of the lid is resiliently deformed, said respective cam members engage and generate a force between the lid and the base in an opposite direction along the longitudinal axis to disengage the cooperating elements to decouple the lid from the base and open the storage compartment.

(51) INT. CL. : F24H 4/04

(54) Invention Title: HEATER ASSEMBLY AND METHOD

(57) Abstract

Described is a heater assembly for an aerosol provision system, the heater assembly including: a substrate; a heater layer configured to generate heat when supplied with energy, the heater layer provided on a first surface of the substrate; and a plurality of capillary tubes extending from another surface of the substrate through the heater layer provided at the first surface of the substrate. Each of the capillary tubes extends to respective openings provided in the heater layer, and the combined area of the openings per unit area of the heater layer in a first region of the heater layer is greater than the combined area of the openings per unit area of the heater layer in a second region of the heater layer. Also described is an aerosol provision system comprising a heater assembly and a method for manufacturing a heater assembly.

(54) Invention Title: PROCESS TO PRODUCE A MELT OF UREA AND BIURET AND SYSTEM TO PRODUCE SUCH A MELT

(57) Abstract

The present disclosure relates to a process and a system for producing a melt comprising urea, biuret, and a minor amount of N-containing compounds produced during a condensation process of urea, the process comprising the steps of pumping a urea melt to one or more reactor vessels each having a headspace at a top part thereof and a bottom part, subjecting the urea melt in the one or more reactor vessels to a heating process with a temperature of between 150°C to 180°C, during the heating process also subjecting the melt present in the reactor vessel(s) to a circulation process in and out of the one or more reactor vessels via a circulation loop arranged externally from each of the reactor vessels, and wherein during formation of the melt, gaseous by-products are produced which are evacuated out of the respective reactor vessel via the top part thereof, and removing the melt out of the one or more reactor vessels via the bottom part thereof.

(54) Invention Title: “SYSTEMS AND METHODS FOR OPERATING AN OVERHEAD ELECTRICAL LINE”

(57) Abstract

Methods and systems for the operation of an overhead electrical line. The systems include one or more distributed sensors associated with an overhead electrical cable and one or more non-distributed sensors associated with the overhead electrical cable. The non-distributed sensors may be used to corroborate line condition values obtained from the distributed sensors, or may be used to calibrate the values obtained from the non-distributed sensors.

(54) Invention Title: COMPOSITIONS FOR INHIBITING EHP INFECTION IN SHRIMP AND RELATED METHODS

(57) Abstract
The present invention relates methods for administering compositions comprising thymoquinone in an amount effectiveto inactivate the EHP spores and reduce the EHP infection rate, where the thymoquinone may be derived from Monarda didyma, Monarda fistulosa, or Nigella sativa. The present invention further relates to methods for controlling the proliferation of EHP in aquaculture, specifically controlling the spread of EHP infection in shrimp populations. Another aspect of the present invention relates to methods for directly inactivating EHP spores to control the intracellular proliferation of EHP by administering compositions containing thymoquinone, for instance compositions containing N. sativa seed oil to shrimp. Another aspect of the present invention relates to compositions containingN. sativa seed extract alone, or in oil, in at least one embodiment in combination with monarda oil, oregano oil, clove oil and cinnamic aldehyde, to control and inhibit the spread of EHP infection and its associated diseases.

(54) Invention Title: A SYSTEM AND METHOD FOR REMOTE CALIBRATION OF A MOTOR IN A VEHICLE

(57) Abstract

The present invention relates to a system (100) and a method (200) for remote calibration of a motor (106) in a vehicle (102).The present invention aims at reducing time and complexity involved in calibration of a motor (106) disposed in the vehicle (102). The type of the motor (106) is identified based on configuration of a coupler (110) coupled with the motor (106) and movement of the shaft of the motor (106). On identification of the type of motor (106), the control unit (104) is configured to detect one or more parameters of the motor (106) which are required to be calibrated and further receive inputs from the remote server (112) for calibration of the one or more parameters of the motor (106). The control unit (104) is flashed with updated configurations received from the remote server (112).

(51) INT. CL. : B60L 53/53

(54) Invention Title: A Battery Pack

(57) Abstract

The present invention relates to a battery pack (10). The battery pack (10) includes a casing (20) and a plurality of battery cells (12) disposed inside the casing (20). A plurality of conduits (60) is disposed on a bottom portion of the casing (20) and projecting externally of the casing (20). The plurality of conduits (60) is configured to enable a dielectric coolant (40) to flow through the plurality of conduits (60). The battery pack (10) also includes a pump (70) mounted to the casing (20). The pump (70) is configured to circulate the dielectric coolant (40) between the casing (20) and the plurality of conduits (60). The plurality of conduits (60) is configured to dissipate heat from the dielectric coolant (40) to a surrounding atmosphere.

(54) Invention Title: FAST-ACTING INSULIN COMPOSITIONS (VARIANTS THEREOF)

(57) Abstract

The present invention relates to the field of pharmaceutical science and medicine, i.e., to the compositions of fast-acting insulin preparations. More specifically, the present invention relates to the compositions comprising a fast-acting insulin and an amino acid as a stabilizer, where the amino acid may be selected from lysine and/or salt thereof, or a combination of lysine and/or salt thereof with arginine and/or salt thereof. Compositions of the invention exhibit better chemical and physical stability compared to the closest prior art.

(51) INT. CL. : B63B 3/52

(54) Invention Title: DECK PLATE

(57) Abstract

There is provided a technique for stacking deck plates in a stable state. A deck plate (10) is formed of a metal plate and includes plane portions (3) and ribs (1 and 2) provided alternately and continuously. Bottom surfaces (13b and 23b) of the ribs (1 and 2) and contact parts (3a and 3b) of the plane portions (3) contacting the bottom surfaces (13b and 23b) of the ribs (1 and 2) when deck plates (10a and 10b) in a pair are stacked while being turned upside down relative to each other are formed in complementary shapes.

(51) INT. CL. : B60K 26/00

(54) Invention Title: Mounting Structure for an Optical Unit of a Saddle-Type Vehicle

(57) Abstract

The present invention is directed to a mounting structure (100) for an optical unit (102) of a saddle-type vehicle (106). The mounting structure (100) includes a front panel assembly (108). A top panel (112) comprises a planar panel (114) mounted onto the top portion (108a) of the front panel assembly (108) and at least one extension portion (116a, 116b) defined on a top surface (114a) of the planar panel (114). Each of the at least one extension portion (116a, 116b) is adapted to support a visor bracket (118) that supports a visor member (120). A bottom surface (114b) is adapted to receive and support the optical unit (102) about a window portion (114c) provided to the top panel (112). The optical unit (102) is adapted to transmit images onto rear surface (120b) of visor member (120), thereby preventing misdirection to rider during vehicle movement.

(54) Invention Title: MODULAR ARCHITECTURE

(57) Abstract

There is provided an aerosol provision device, the aerosol provision device comprising a control unit for controlling an operating system in which applications are managed according to an architecture,wherein the architecture comprises a plurality of layers of logic, the layers comprising a lowermost layer for controlling hardware of the aerosol provision device, and layers above the lowermost layer which have higher levels of abstraction from the hardware, andwherein the layers of the architecture are configured to provide vertical modularity, such that the logic of each layer may be modified independently to logic of the other layers.

(54) Invention Title: INSULIN ASPART COMPOSITION (VARIANTS)

(57) Abstract
The present invention relates to the field of pharmacy and medicine, i.e., to compositions of fast-acting injectable insulin preparation. More specifically, the present invention relates to the compositions comprising insulin aspart, a nicotinic acid compound, a surfactant selected from poloxamer 188, polysorbate 20, polysorbate 80, or a combination thereof, an amino acid selected from lysine, arginine and/or a salt thereof, and/or a combination thereof. The compositions of the invention are useful for reducing blood glucose level in a subject, and are particularly useful in insulin preparations requiring high stability against thermal and/or physical and mechanical stress.

(51) INT. CL. : B23K 9/067

(54) Invention Title: Transformer, arc detection system and method for detecting an arc

(57) Abstract

The invention relates to a transformer (1) with a housing (3) and an arc detection system (43), which comprises at least one light transmission means (45, 55), in particular an optical waveguide, and a light detector (47) for receiving electromagnetic radiation transmitted via the light transmission means, characterized in that the light detector (47) is arranged outside the housing (3) and the light transmission means (45, 55) is arranged at least partly inside the housing (3) and at least a part of the light transmission means (45, 55) inside the transformer (1) is adapted to receive electromagnetic radiation occurring inside the housing (3). Further, the invention relates to an arc detection system (43) for use in a transformer (1). Further, the invention relates to a method for detecting an arc in a transformer (1) according to the invention, comprising the steps of: Detecting an electromagnetic radiation transmitted by the light transmission means (45, 55) to the light detector (47), comparing the duration and/or the intensity of the electromagnetic radiation and/or the wave spectrum with one or more limit values, and initiating protective measures in the transformer if one or more limit values are exceeded, in particular disconnecting the input power and/or opening a drain valve (31) on the housing (3) and/or introducing an inert gas, in particular nitrogen, via an inlet valve (33).

(51) INT. CL. : F02B 63/06

(54) Invention Title: MANPOWER MULTI-STAGE DOWNSTROKE LIFT PUMP

(57) Abstract

The present Patent belongs to the technical field of drawing water, and discloses a manpower multi-stage downstroke lift pump, which includes a manual downstroke lift pump body, a water pipe, multi-stage intermediate pumps, a water outlet pipe set up on one side of the manual downstroke lift pump body, a downstroke structure installed at the top of the manual downstroke lift pump body and a piston rod installed at the lower part of the downstroke structure, wherein the piston rod penetrates the manual downstroke lift pump body, the lower part of the manual downstroke lift pump body is connected with the water pipe, the intermediate pumps in multi-stages are evenly distributed and connected on the water pipe; the intermediate pump in each stage includes a pump body, a bottom valve arranged on the bottom of the pump body, a piston movably installed in the pump body, and an unidirectional valve installed in the middle part of the piston; the top of the piston is connected with the piston rod. The present Patent greatly raises the water-lift by way of combining the structure of multi-stage intermediate pumps with the manual downstroke lift pump body of the existing well-adapted water lifting equipment, further enables the pump to provide a high water-lift, and labor-saving and durability; moreover, the piston moves upwards and downwards in the fixed hollow pump body, prolonging its service life and reducing replacement.

(57) Abstract

The present disclosure relates to a pack for aerosol-generating articles. The pack comprises a wrapped bundle comprising an inner wrap enclosing a group of aerosol-generating articles. The pack comprises an outer wrap comprising a flexible sheet material that encloses the wrapped bundle such that the wrapped bundle is not visible prior to opening of the pack. The outer wrap comprises a plurality of flaps that overlie an end of the wrapped bundle and wherein one or more of the flaps is retained in position by an adhesive, wherein the outer wrap is configured to be opened to provide access to said end of the wrapped bundle. The present disclosure also relates to a method of manufacturing a pack for aerosol-generating articles.

(54) Invention Title: Improvements to apparatus for the application of resin along a crease line of a garment.

(57) Abstract

The invention relates to applicator apparatus for the application of a resin material along a crease line of a garment, said applicator apparatus including a body in, or to, which said resin material is provided and the body includes, or is connected to, a dispensing aperture to allow the supply of said resin through the dispensing aperture onto said crease line as the applicator apparatus is moved along said crease line. The applicator apparatus includes a plurality of guide means provided at spaced locations with respect to said body so as to contact with the crease line at spaced apart locations in advance of the said dispensing aperture. At least one of the said guide means includes location means and a rotatable member and it is the rotatable member which rotates and contacts with the said crease line, during the application of the resin therealong so as to improve the accuracy of application of the resin material to the base of the crease line on the surface of the garment which faces inwardly towards the wearer when the garment is worn.

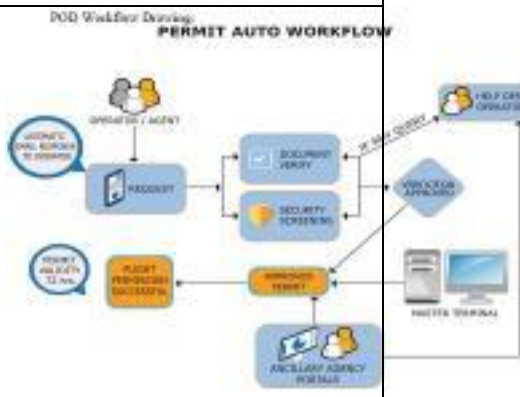
(51) INT. CL. : F42B 6/00

(54) Invention Title: brief description of our Invention a fully automated permit issuance technology for ANSP to issue flight permits for operators. The transmission from legacy systems to automated infrastructure.



(57) Abstract
Permit Operations Database (POD). The invention pertains to an automated flight permit management system designed to optimize processing flight permits for non-scheduled flights by foreign registered aircraft. At its core, the system incorporates a novel permit operation database (POD) that revolutionizes the traditional approach to permit issuance and management. The permit operation database (POD) is characterized by a cloud-based architecture, ensuring scalability, flexibility, and accessibility. Unlike conventional databases, the POD dynamically adjusts decision-making processes based on real-time data and changing conditions, enhancing adaptability and responsiveness in permit processing. Security and access controls are paramount in the invention, with the POD implementing a role-based access control (RBAC) system for fine-grained permissions management. Predictive analytics using machine learning algorithms are integrated into the database, allowing for the estimation of permit processing times and optimization of resource allocation. In a groundbreaking move, the invention incorporates blockchain technology into the permit operation database, ensuring immutable record-keeping. This feature enhances transparency and trust in the permit issuance process. The user interfaces associated with the permit operation database are designed with an intuitive dashboard, catering specifically to the needs of aviation professionals involved in the permit issuance and management process. This ensures a user-friendly experience and streamlined interaction with the system. The automated flight permit management system, coupled with the innovative permit operation database, aims to improve operational efficiency, collaboration among stakeholders, and overall financial performance for Air Navigation Service Providers (ANSPs) and Civil Aviation Authorities in the Asia Pacific region. This abstract provides a brief yet comprehensive overview of the key features of the invention, emphasizing the novel aspects of the permit operation database and its role in transforming the traditional permit processing workflow.

(54) Invention Title: ATTACKER IDENTIFICATION DURING SMALL DATA TRANSMISSION

(57) Abstract

According to an aspect, there is provided a terminal device for performing the following. The terminal device obtains, when the terminal device is in an inactive state while a small data transmission, SDT, procedure is ongoing, information that in-dicates transmission of a data unit over a radio bearer to the terminal device. The ter-minal device checks whether or not the radio bearer is configured for the SDT proce-dure. The terminal device determines whether or not to avoid further processing and/or decoding of the data unit based at least on the checking.

(54) Invention Title: A System for Integration of a Speedometer Unit in a Vehicle and a Method thereof

(57) Abstract

The present invention relates to a system (100) and method (200) for integration of a speedometer unit (110) in a vehicle (10). The system (100) has a plurality of control units (130) that are configured to store at least a vehicle identification number (VIN) corresponding to the vehicle (10). Further, the system (100) has a speedometer unit (110) configured to store a set of prestored VIN corresponding to a plurality of vehicle types, and a plurality of sets of preloaded features. The speedometer unit (110) requests and receives the VIN from at-least one of the plurality of the control units (130). The speedometer unit (110) maps the received VIN with the prestored set of VIN and identifies and selects a set of preloaded features which correspond to identified vehicle type and displays the selected prestored set of information.

(51) INT. CL. : H04N 19/597

(54) Invention Title: ENCODING POINT DATA INDICATING A PLURALITY OFPOINTS IN A THREE-DIMENSIONAL SPACE

(57) Abstract

There is provided a method of encoding point data that indicates a plurality of points in a three-dimensional, 3D, environment. The method comprises obtaining the point data and grouping the plurality of points into a plurality of slices which includes a first slice and a second slice, wherein i) the first slice includes a first set of points and a second set of points, and ii) the second slice includes the first set of points and the second set of points. The method further comprises encoding the point data using the plurality of slices. Encoding the point data using the plurality of slices comprisesfor the first slice, encoding first point data indicating the first set of points, thereby generating a first encoding point; andfor the second slice, encoding second point data indicating the second set of points, thereby generating a second encoding point, and the first encoding point and the second encoding point are the same.

(51) INT. CL. : B60K 35/00

(54) Invention Title: A VEHICLE

(57) Abstract

The present invention relates to a vehicle (100) comprising a single display unit (102). The single display unit (102) is a heads up display unit angularly projected at a line of sight (A) of a rider of the vehicle (100). The single display unit (102) is configured for displaying one or more first information and one or more second information. The one or more first information is related to parameters of the vehicle (100) and the one or more second information is received from one or more devices communicatively coupled to the vehicle (100). In the present invention, the conventionally used speedometer is absent which reduces the overall cost of the vehicle (100), simplifies design of the vehicle (100) and also provides additional space on the handlebar assembly (108) of the vehicle which can be used as a storage compartment.

(51) INT. CL. : F23J 15/08

(54) Invention Title: PRIMARY HEATER IN DRAWN TEXTURING YARN PRODUCTION

(57) Abstract
The present disclosure provides for a heater in drawn texturing yarn production, may include a heating element configured on to the heater to generate and apply heat to a yarn passing through the heater. The heater may also include an inlet and an outlet configured at a first end of the heater, configured to allow the yarn to enter into the heater and said outlet configured to allow the yarn to exit the heater. Further, the heater may include a reversing guide configured at second end of the heater to reverse the direction of the yarn passing through the heater, said inlet, said outlet and said reversing guide are configured such that the yarn enters into the heater from the inlet and passes through the length of the heater to the reversing guide, where said reversing guide reverses direction of the yarn to allow said yarn to pass through the length of the heater from the reversing guide to the outlet.

(54) Invention Title: METHOD, APPARATUS, AND SYSTEM FOR TRANSFERING DATA

(57) Abstract

A method and system for transferring encrypted data from a first electronic device to a second electronic device, each of the electronic devices including an input/output interface, a memory and a processor. The method can be carried out without the first and/or second electronic device having an active data signal. The method includes the steps of displaying a first encrypted two-dimensional code at the output interface of the first electronic device, reading the first encrypted two-dimensional code with the input interface of the second electronic device, and decrypting the first two-dimensional code with the processor and memory of the second electronic device, generating a second encrypted two-dimensional code with the processor and memory of the second electronic device in response to the first decrypted two-dimensional code, and displaying the second encrypted two-dimensional code on the output interface of the second electronic device, reading the second encrypted two-dimensional code with the input interface of the first electronic device and decrypting the second two-dimensional code with the processor of the first electronic device and generating an action on the first electronic device based on the second decrypted two-dimensional code. The second two-dimensional code is a plurality of two-dimensional codes.

(54) Invention Title: Low-Cost Zero Discharge Process with Rainwater Harvesting and Desulphurization for Power Generation Industry

(57) Abstract
The Low-Cost Zero Discharge Process with Rainwater Harvesting and Desulphurization for Power Generation Industry introduces an integrated approach for achieving sustainable water management and emissions control. The process combines cost-effective zero discharge principles with rainwater harvesting and desulphurization techniques to provide a holistic solution for the power generation industry. The invention emphasizes water sustainability, reduced reliance on external water sources, and emissions control in a financially viable manner.

(54) Invention Title: Formulation of Liquid Organic Acids and a Method for pH Control Utilizing the Same
(57) Abstract The present innovation involves a method that employs organic acids, encompassing monocarboxylic, dicarboxylic, or tricarboxylic saturated aliphatic carboxylic acids, and their combinations, to regulate pH levels in textile processing. Various liquid and solid acids have undergone testing, and two prerened formulations are detailed herein. Their advantages over conventional acid, such as acetic acid and inorganic acids, are discussed. The formulations demonstrate the capability to adjust pH of a standard industry textile processing bath within a range of 4-6, with no discernible, impact on fabric integrity, as evidenced by the required force for fabric bursting and the time taken to burst.

(54) Invention Title: SYSTEM AND METHOD FOR DIGITIZED GARMENT CREATION

(57) Abstract
A system (100) and method for digitized garment creation is provided. Inputs are received via actionable User Interface (UI) for designing garments and analyzed for determining requirements for designing garments. Analyzed inputs are in the form of first set of instructions. Multiple fabric pieces data is fetched and rendered in graphical format based on second set of instructions. Circulatory score is computed for metadata associated with each of multiple fabric pieces data. Size of garment type is tagged on actionable UI using tagged fabric piece data. Garment types are fetched and rendered in template form on UI. Designs are rendered for selection for designing garment type. Tagged garment type template is split into fixed number of panels, panels are configurable for being embedded with images. Avatar of user is generated for displaying designed garment type on user from different sides of user as virtual try-on technique.

(54) Invention Title: Integrated Healthcare System and Associated Method

(57) Abstract

An integrated healthcare system including at least one general practitioner 12, at least one optician 14, at least one dentist 15, at least one ear, nose and throat specialist 16, and at least one diagnostics centre 18. A healthcare-system on-boarding method of identifying a healthcare package for a patient to an integrated healthcare system. The method comprises assessing a patient's geographical history data and application data via a patient electronic device to determine whether a threshold level is reached. Proposed package data is then displayed to a prospective patient based on whether a threshold level is reached.

(54) Invention Title: A Continuously Variable Transmission System

(57) Abstract
The present invention relates to a Continuously Variable Transmission (CVT) System (100). The CVT system (100) comprising of a continuously variable transmission (CVT) drive assembly (110) having a fixed drive sheave (112) and a movable drive sheave (114), a CVT driven assembly (120) which is configured to be driven by the CVT drive assembly (110). A cam member (130) provided abutting to the movable drive sheave (114) and configured to restrict the movement of the movable drive sheave (114), wherein the cam member (130) being moveable between a plurality of positions. A cam member shaft (140) being configured to support the cam member (130). An actuator mechanism (150) being configured to rotate the cam member shaft (140), thereby moving the cam member (130) between the plurality of positions to restrict the movement of the movable drive sheave (114) at a plurality of gaps from the fixed drive sheave (112).

(54) Invention Title: METHOD

(57) Abstract

The present invention provides a method for modulating the alkaloid content of a plant (e.g. a tobacco plant), the method comprising modifying said plant by modulating the activity or expression of a HNH endonuclease domain containing peptide. The present invention also provides for the use of a HNH endonuclease domain containing peptide for modulating the alkaloid content of a plant, as well as tobacco cells, plants, plant propagation materials, harvested leaves, processed tobaccos, or tobacco products obtainable in accordance with the invention.

(51) INT. CL. : B60L 53/50

(54) Invention Title: Hydrodynamic Energy Storage and Electricity Generator

(57) Abstract

A hydrodynamic energy storage and electricity generator (10) is provided which comprises first and second fluid storage columns (12, 14), and an openable and closable conversion valve (16) therebetween. A return conduit (42) connects the first and second fluid storage columns (12, 14), with a turbine and generator assembly (26) being positioned on a fluid flow path of the return conduit (42). There is at least one energy storage device (36) associated with at least one hydrostatic cylinder (20) connected to the second fluid storage column (14). On opening of the conversion valve (16), fluid in the first fluid storage column (12) is permitted to flow into the second fluid storage column (14) to drive the at least one energy storage device (36) to store energy, and upon closing the conversion valve (16), fluid in the second fluid storage column (14) is hydromechanically directed via the return conduit (42) to the first fluid storage column (10), thereby driving the turbine and generator assembly (26) to generate electricity.

(51) INT. CL. : H04W 84/18

(54) Invention Title: WIRELESS DEVICE, NETWORK NODE, AND METHODS PERFORMED THEREBY,FOR HANDLING ABSENCE OF AN ACTIVE CONNECTION

(57) Abstract
A method, performed by a wireless device (130), for handling absence of an active connection to a network node (110). The wireless device (130) and the network node (110) operate in a wireless communications network (100). The wireless device (130) obtains (201) a first indication from the network node (110)indicating that the wireless device (130) is to perform an estimation, of a quality of a radio channel between the wireless device (130) and the network node (110), during a random access procedure in the absence of an active connection to the network node (110) and prior to receiving data from the network node (110). The wireless device (130) estimates (203), in the absence of the active connection, the quality of the radio channel and then sends (204), still in the absence of the active connection, another indication to the network node (110)indicating the estimated quality of the radio channel.

(54) Invention Title: AEROSOL PROVISION SYSTEM, HEATER ASSEMBLY AND METHOD

(57) Abstract

Described is an aerosol provision system, the aerosol provision system including an aerosol-generating material storage portion for storing aerosol-generating material, a heater assembly, where the heater assembly includes a substrate; a heater layer configured to generate heat when supplied with energy, the heater layer provided on a first surface of the substrate; and one or more capillary tubes extending from another surface of the substrate through the heater layer provided at the first surface of the substrate; and a heat-sink layer. The heater assembly is arranged such that at least the another surface is in fluid communication with the aerosol-generating material storage portion. The heat-sink layer extends across at least a part of the another surface of the substrate and is configured to allow aerosol-generating material to pass through the heat-sink layer to the one or more capillary tubes of the heater assembly. The heat-sink layer is configured to absorb heat energy generated by the heater layer and transmitted through the substrate and distribute the absorbed heat energy through the heat-sink layer. Also described is a heater assembly and a method for manufacturing a heater assembly and heat-sink layer.

(57) Abstract

A vehicle (100), a brake caliper assembly (102), and a method (400) for prediction of wear in a brake pad. The vehicle (100) includes a display unit (106), a controller and a brake caliper assembly (102). The brake caliper assembly (102) includes a caliper (108), a first brake pad (200) and a second brake pad (202), where the first brake pad (200) and the second brake pad (202) is mounted to the caliper (108), and is movable with respect to the caliper (108). The brake caliper assembly (102) has a piston (112) movably disposed in the caliper (108) and operably coupled to at least one of the first brake pad (200) and the second brake pad (202). At least one sensor (114) of the brake caliper assembly (102) is mounted on the caliper (108) to sense the movement of the piston (112).

(54) Invention Title: FASTENING PART, SLIDE FASTENER, AND METHOD OF PRODUCING FASTENING-PART-ATTACHED GROUND FABRIC.

(57) Abstract

Fastening part (2,2') is attachable to an edge portion (91) of an article (9) directly or via an intervening member. The fastening part (2,2') includes: an attachment surface (2a) disposed on one side in a thickness direction of the fastening part (2,2'), the thickness direction being orthogonal to an elongation direction of the fastening part (2,2'); and an engagement structure (2b) disposed on an opposite side of the attachment surface (2a) in the thickness direction of the fastening part (2,2'). The engagement structure (2b) includes one or more lines (21-24) of engagement elements including engagement elements (30) arranged along the elongation direction of the fastening part (2,2'). Each engagement element (30) being provided to stand on the opposite side of the attachment surface (2a).

(54) Invention Title: MITIGATION OF POSITIONING MEASUREMENT IMPACT ON RLF PROCEDURE.

(57) Abstract

Example embodiments of the present disclosure relate to apparatuses, methods, and computer readable storage medium for mitigation of positioning measurement impact on a radio link failure (RLF) procedure. In a method, an apparatus performs a RLF process and performs a positioning measurement process. At least one of the RLF process or the positioning measurement process is adjusted to mitigate collision between the processes.

(51) INT. CL. : B65D 5/42

(54) Invention Title: AN ARRANGEMENT FOR ARRANGING NUMBER OF FILAMENTS TO A BUNDLE AND A METHOD THEREOF.

(57) Abstract

An arrangement (100) for arranging number of filaments (103) transferred by a transferring device (101) to at least two separate subsets of said filaments comprises at least one fluid flow providing device (108) for providing fluid flow (109) towards at least one portion of the filaments (103) transferred by a transferring device (101), thereby deflecting a path of said portion of the filaments in a second direction (110) differing from a first direction (107) said filaments being transferred by said transferring device (101). The filaments are thus separated to at least two filament subsets (103A, 103B) of the filaments. The filament subsets may then be arranged to at least two separate and advantageously separately reopenable bundles (113).

(74) Agent : Remfry & Son Limited , {app_representative_address}, Bangladesh

(51) INT. CL. : B64C 3/14

(54) Invention Title: AN ARRANGEMENT FOR CONTROLLING A PATH OF A MATERIAL DURING TRANSFERRING AND A METHOD THEREOF.

(57) Abstract

An arrangement (100) for controlling a path (102) of material, such as filaments (103) comprisesat least one fluid flow providing device (104). The one fluid flow providing device (104) comprises an input (105) for receiving pre-fluid flow, and an output (106) for providing and focusing a high-speed fluid flow (107) towards the material (103) during the transportation of the material. The speed of the high-speed fluid flow (107) is higher than a transferring speed of the material (103), whereupon a velocity gradient of the high-speed fluid flow (107) induces a force (109), which drags the material (103) towards a maximum of said velocity gradient and thereby change the path (102) of the material (103).

(51) INT. CL. : F02M 21/02

(54) Invention Title: A FUEL SUPPLY SYSTEM WITH AN INTEGRATED DEVICE AND METHOD THEREOF FOR AN AUTOMOTIVE VEHICLE

(57) Abstract

A fuel supply system (100) is disclosed for an automotive vehicle, including a storage cylinder (101) to store gaseous fuel; an electronic gate valve (102) to control and supply gaseous fuel from the storage cylinder(101); and an integrated device (103) to control and supply the gaseous fuel to an engine (106) of the automotive vehicle. The integrated device (103) includes a primary filter (103a), a pressure reducer (103b) and an integrated electronic gate valve (103c) in single fabrication, making the fuel supply system (100) compact, clean and simple, by reducing requirement of hoses and additional brackets for mounting. Further, the assembly, dismantling, as well as servicing of the primary filter (103a), and the pressure reducer (103b) of the integrated device (103) becomes easy. The integrated device (103) reduces fuel flooding and improves cold-start of the automotive vehicle.

(51) INT. CL. : A23L 25/00

(54) Invention Title: Preparation of Jackfruit Seed Mineral Concentrate

(57) Abstract
The innovative chemical process introduced by the invention aims to extract food minerals from plant sources naturally abundant in minerals, addressing micronutrient deficiencies, particularly in regions like Bangladesh. The process was specifically tested using jackfruit seed flour. Initially, it separates protein from JFS flour through alkaline protein extraction. Subsequently, the remaining starchy portion undergoes unit operations like filtration and spray drying to achieve a concentrated mineral form. The process demonstrates a remarkable concentration capability, with minerals from JFS flour being concentrated nearly 10 times. This effectiveness is evident in the comparison of ash content, where JFS flour had 2.10%, and the concentrated mineral reached 33.45%. With the applicability in food fortification and sustainability benefits, this invention holds significant potential for being used in the food and allied industries. As a case study, a food item cake was successfully enriched with mineral using the prepared mineral concentrate.

(54) Invention Title: LIMITED BUFFER RATE MATCHING CALCULATION

(57) Abstract

Embodiments of the present disclosure relate to devices, methods, apparatuses and computer readable storage media of limited buffer rate matching (LBRM) calculation for simultaneous multi-panel transmission. The method comprises: receiving, by a terminal device and from a network device, one or more maximum rank values for at least one BWP of one or more serving cells of the terminal device, wherein the one or more maximum rank values are associated with one or more PUSCH transmission schemes;determining, by the terminal device,based at least on the one or more maximum rank values, a maximum number of layers for LBRM; anddetermining, by the terminal device, a TBS for LBRM using the maximum number of layers.

(54) Invention Title: PLOUGH APPARATUS AND METHOD

(57) Abstract

Plough apparatus for use underwater to displace sediment above a waterbed. The plough apparatus 100 comprises an elongate blade 110 comprising a concave leading face 150 to contain and move sediment and a connector 310 at a highermost point on the plough apparatus 100 for attachment to a vehicle for suspending the plough apparatus 100 underwater. The plough apparatus 100 further comprises a pair of plough wings 170 which extend forwardly from side edges 140 of the elongate blade 110 at an angle between coaxial and perpendicular with respect to the leading face 150. The method comprises suspending the plough apparatus 100 from a vehicle, moving the plough to contain sediment and drawing the sediment into an area of water whereby the sediment may be washed away by the natural movement of the water.

(54) Invention Title: ELECTRICAL COMPONENTS ASSEMBLY FOR A VEHICLE

(57) Abstract

The present subject matter relates to an electrical component assembly (200) for a vehicle (100). The electrical components assembly (200) comprises electrical components (201) and a support member (300). The support member (300) is configured to support the electrical components (201). The support member (300) is mounted on a rear frame member (400R) of a frame assembly (400) of the vehicle (100). The rear frame member (400R) is extended in a lateral direction of the vehicle (100). The rear frame member (400R) is attached to a portion of the frame assembly (400).

(54) Invention Title: METHODS AND DEVICES FORTIMING ADVANCE

(57) Abstract

Embodiments of the present disclosure relate to methods and apparatus fortiming advance (TA) in a radio access network, in particular, through random access preamble transmission for TA maintenance. A terminal device receives, from a network device, a transmission mode configuration which indicates to the terminal device a transmission mode of a random access preamble. The transmission mode comprises a periodical mode or a one-shot mode. The terminal device transmits, to a targetnetwork device, the random access preamble based on the transmission mode. In this way, the terminal device can transmit the random access preamble based on the indicated transmission mode, thereby avoiding unnecessary transmissions of the random access preamble forTA maintenance.

(51) INT. CL. : D06P 1/22
(54) Invention Title: Sustainable Denim Lean Washing Recipe Technology (SDLWRT) compared to the Conventional denim washing recipe method/technology, including the SDLWRT analysis tool.
(57) Abstract The Sustainable Denim Lean Washing Recipe Technology (SDLWRT), developed by denim washing technologist & Inventor – Mr. K. M. Zahidur Rahman, presents a pioneering approach to revolutionize denim washing practices. SDLWRT aims to minimize environmental impact and production costs while maintaining high-quality aesthetic outcomes in denim garments. By optimizing washing processes and reducing resource consumption, SDLWRT offers significant savings in water, chemicals, energy, steam, and time compared to conventional methods. Thirdparty audits & internal SDLWRT analyzing - assessment tool validate its effectiveness, showcasing substantial environmental and economic benefits. Moreover, SDLWRT prioritizes worker safety by eliminating hazardous chemicals like PP spray. This innovative technology not only enhances sustainability in denim manufacturing but also positions brands as leaders in environmental stewardship and innovation. SDLWRT represents a paradigm shift towards a more sustainable and efficient future for the denim industry.

(51) INT. CL. : A44B 19/30

(54) Invention Title: SLIDER

(57) Abstract
A slider (1, 2) of the present invention includes a slider body (10, 70), an elastic member (40, 100), and a pull (50, 110), the slider body (10, 70) is made of an aluminum alloy that has a composition represented by a general expression: AlaMgbMncCrd (a, b, c, and d are in mass%, a is a remainder, $3.9 \leq b \leq 6.5$, $0 < c \leq 0.4$, $0 < d \leq 0.3$, an unavoidable impurity element may be contained) or a general expression: AleMgfSigCuhCri (e, f, g, h, and i are in mass%, e is a remainder, $0.8 \leq f \leq 2.0$, $0.4 \leq g \leq 0.9$, $0.15 \leq h \leq 0.8$, $0 < i \leq 0.45$, an unavoidable impurity element may be contained), a member accommodation portion (30, 90) including an insertion concave groove portion (31, 91) is provided at a coupling column (12, 72) of the slider body (10, 70), and the average Vickers hardness of the coupling column (12, 72) is higher than or equal to 100 Hv. Consequently, it is possible to cause the slider body (10, 70) not to be deformed to become unusable, even when a sliding operation of the slider is repeated.

(54) Invention Title: MULTI-PURPOSE GLASSES CASE DEVICE.

(57) Abstract
A multi-purpose glasses case device is provided.The device is used for securely storing and accessing personal items like eyeglasses. This device is composed of two halves connected by a hinge, wherein each half is comprised of a sidewall forming an interior space with various fasteners and storage areas. The device also incorporates a customizable decorative cap that can attach to either half and may include additional functionalities like a battery bank or a charger. The cap and both halves can be adorned with decorative elements and have attachment points for easy carrying. Additionally, the device may include a phone receiving structure that can display a phone in various positions and may include charging capabilities.

(54) Invention Title: A Multi Chamber and Multi-stage Grinding ball mill

(57) Abstract

The present invention belongs to the field of ball mill design and manufacturing, and specifically relates to a novel energy-saving grinding material treatment process ball mill design. A multi chamber and multi stage grinding ball mill is disclosed, which mainly includes a frame, multiple drum groups with separated compartments, feeding and discharging ports, rotating steel rings and supporting wheels, gear transmission steel rings, and/or supporting rotating shafts and bearing seats, and transmission devices. Mainly through the combination of at least two or more individual two compartment cylinders, and the connection of each individual compartment cylinder is arranged in a regular distribution according to a 360 degree circumferential division, that is, in the same rotation direction, the projection of all partition plates along the centerline of the drum rotation axis overlaps concentrically and evenly divides the circumference, eliminating as much as possible the deviation of the gravity center of the ball mill from the upward direction of rotation, so that the weight on both sides of the center of the ball mill is almost equal, It can save electricity, efficiently and quickly grind, efficiently dry grind and wet grind, as well as feed and grind 500 tons and 1000 tons of ultra large tonnage, providing a

(54) Invention Title: A wet production process and equipment design scheme for brick billets without granulation process

(57) Abstract
The invention belongs to the technical field of ceramic wall and floor tile production, and in particular relates to a process and equipment design scheme for directly producing ceramic brick blanks without dry granulation and wet granulation processes, which is particularly suitable for the design scheme of direct and efficient wet low-carbon production of ceramic rock slabs with whole texture. The invention relates to a wet production process and equipment design scheme of a green brick without granulation process, which is characterized in that the equipment mainly comprises a digital slurry jet printing device, a suction filter, an extrusion filter press device, a drying kiln device, a high-pressure press and a device for interconnecting and conveying the equipment, and the process flow scheme of the equipment device is that high-concentration ceramic slurry is spray-molded through a digital ceramic slurry jet printing device, Then it is quickly dewatered into a wet brick with a water content of 8%-18% by suction filtration, extrusion filter pressing and punching filter press devices, and then the wet brick is dried and dried to make the wet brick become a brick with a homogenized humidity of 6-13%, and then it is further pressed into a more compact brick by high pressure.

(54) Invention Title: THERMOCHEMICAL REACTIONS USING GEOTHERMAL ENERGY

(57) Abstract

A first aspect is directed to a method for producing hydrogen by thermochemical splitting of water includes injecting one or more feed streams of water into a reaction chamber. The method further includes using heat from a subterranean heat source to carry out the thermochemical splitting of water to form hydrogen and oxygen in the reaction chamber. The formed products are subsequently removed from the reaction chamber. A second aspect is directed to a reaction system includes a wellbore extending from a surface into a subterranean heat source. The reaction system further includes a reaction chamber configured to be maintained at a reaction temperature., using heat from the subterranean heat source. The reaction system further includes one or more inlet conduits. The inlet conduits are configured to provide one or more feed streams to the reaction chamber. The reaction system also includes outlet conduits configured to allow flow of one or more product streams.

(54) Invention Title: POWER CONTROL FOR SIDELINK PHYSICAL SIDELINK FEEDBACK CHANNEL TRANSMISSION.

(57) Abstract

Systems, methods, apparatuses, and computer program products for determining the transmit power for a common interlace and RBs. One method may include a UE determining a PSFCH allocation for at least one dedicated RB, calculating a corresponding transmission power of the PSFCH allocation for the at least one dedicated RB, and determining an allocation of common PSFCH RBs. The method further include,based upon the transmission power for the dedicated resource blocks and the determined number of common resource block, calculating transmission power for the common RBs.

(51) INT. CL. : C25B 1/01

(54) Invention Title: A Production process of multi-functional lip care product

(57) Abstract
Natural plant ingredients that are readily available in the area were used to design the ‘Production of multi-functional lip care product’ procedure. We employed UK-grade white petroleum jelly as a base material due to process development, and we also used Olive oil (Olea europaea L.), Palmarosa essential oil (Cymbopogon martinii (Roxb.) Will.Watson), Turmeric leaf oil (Curcuma longa L.), and Sandalwood oil (Santalum album L.) as active components. Palmarosa essential oil was the only one of the four to exhibit antibacterial and antifungal properties. Turmeric leaf oil and Sandalwood oil are utilized for aesthetic purposes. Sandalwood oil was also applied to the skin as an emollient. In addition to serving as a preservative, Olive oil was put on the skin to make it more emollient. Since the four oils release their aroma gradually when combined, no artificial chemicals were required. Finally, by constricting the pores, we were able to seal the moisture in the lip skin by using mint crystal in the perfect mix with the right components. It also soothes dry lip skin and itchy scalp conditions. Mint's abundant antioxidant content can maintain healthy, damage-free lip skin, reviving drab, damaged lip.

(51) INT. CL. : A23G 9/04

(54) Invention Title: A process for the production of Antidiabetic sweet potato flakes

(57) Abstract
Ipomoea batatas (L.) (commonly known as sweet potato in Bangladesh) has been shown to have many medicinal importance. It is a functional foods. A food is said to be functional food if it provides preventive, protective and/or curative function against one or more diseases, in addition to its adequate nutritional benefits. Hence, this study was undertaken to assess the anti-diabetic effect of sweet potato flakes in rat model through hematological, biochemical and histopathological parameters. For this study, a formulation of sweet potato derived flakes was designed and its effective role of ameliorating diabetic conditions was evaluated in the Streptozotocin-nicotinamide-induced diabetic rats. As hyperglycemia in Wistar male rats was reduced in a significant way on 2, 3, 4 and 5 weeks after starting sweet potato flakes derived functional diet. At the same time, antioxidative notion of sweet potato flakes was ensured by the high degree of SOD, CAT measurements. Additionally, In the histopathological examinations, especially of the pancreas of Wistar diabetic rats, remarkable regranulation of pancreatic islets β-cells was observed in the sweet potato flakes group after the long experimental study. This study stipulated that Sweet potato flakes could be used as anti-diabetic component in case of diabetes mellitus.

(54) Invention Title: Isolated bispecific antibody that specifically binds to CD3 and tumor antigen, and use thereof

(57) Abstract

The present invention relates to the field of biotechnology and medicine, in particular to a bispecific antibody that specifically binds to CD3 and a tumor antigen. The invention further relates to a nucleic acid encoding the subject bispecific antibody, an expression vector, a host cell for producing the subject bispecific antibody and a method for producing said cell, pharmaceutical compositions comprising the bispecific antibody according to the invention, pharmaceutical compositions comprising the bispecific antibody according to the invention and other therapeutically active compounds, methods for treating diseases or disorders mediated by a tumor antigen, use of the bispecific antibody or pharmaceutical compositions thereof for treating diseases or disorders mediated by a tumor antigen, and the use of the bispecific antibody according to the invention and other therapeutically active compounds for treating diseases or disorders mediated by a tumor antigen.

(51) INT. CL. : C40B 50/08

(54) Invention Title: GREEN SYNTHESIS OF 3-(2-HYDROXYPHENYL)-1-PHENYLPROP-2-EN-1-ONE

(57) Abstract

3-(2-Hydroxyphenyl)-1-phenylprop-2-en-1-one chalcone derivative was synthesized by aldol condensation reactions of acetophenone with 2-hydroxy benzaldehydes in green solvent (water) instead of organic solvents (methanol, ethanol, propanol etc). The structure of 3-(2-hydroxyphenyl)-1-phenylprop-2-en-1-one was confirmed by their FT-IR, Uv-Vis, 1H-NMR and 13C-NMR spectra. A density functional theory (DFT) computational study was undertaken to investigate the energy minimized structures and optimized energy with consideration of all possible E/Z and s-cis/s-trans geometrical and regioisomers. The DFT computational data show that the s-cis-(E) isomer, is thermodynamically more stable than those of the corresponding s-cis-(Z)– and s-trans-(E/Z) isomers. Furthermore, time dependent-DFT calculations were conducted to generate vertical excitation energies, absorption wavelengths and the oscillator strengths of the chalcone derivatives. The HOMO–LUMO results and some other physicochemical parameters of the 3-(2-hydroxyphenyl)-1-phenylprop-2-en-1-one are also calculated.

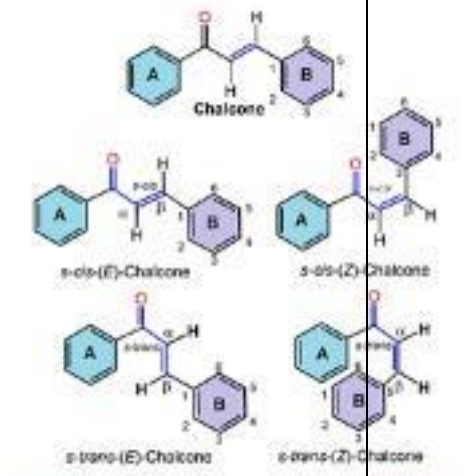

Figure. 1: The four possible stereoisomers of chalcone

(54) Invention Title: Development of omega -3 fatty acid enriched Nannochloropsis sp. powder
(57) Abstract Spray dryer: A spray dryer takes a liquid stream and separates the solute or suspension as a solid and the solvent into a vapor. The solid is usually collected in a drum or cyclone. The liquid input stream is sprayed through a nozzle into a hot vapor stream and vaporized. Solids form as moisture quickly leaves the droplets.

(54) Invention Title: AEROSOL PROVISION SYSTEM, CONSUMABLE, AND METHOD

(57) Abstract

Described is an aerosol provision system for generating aerosol from an aerosol-generating material for inhalation, including a heater assembly comprising a substrate having a first surface on which a heater layer is provided, a second surface opposite the first surface, and one or more capillary tubes extending from the second surface through the heater layer provided on the first surface. The distance from at least one side surface of a first region of an aerosol-generating material storage portion that shares a surface with one or more side walls of the aerosol-generating material storage portion to the centre of an exposed part of a second surface of the heater assembly is greater than the distance from the at least one side surface that has an open surface with the second region of the aerosol-generating material storage portion to the centre of the exposed part of the second surface of the heater assembly. Also described is a consumable and a method for manufacturing a component of aerosol provision system.

(54) Invention Title: HEATER ASSEMBLY, AEROSOL PROVISION SYSTEM, AND METHOD

(57) Abstract

Described is a heater assembly for an aerosol provision system, the heater assembly defining a three-dimensional object having a plurality of outer surfaces. The heater assembly includes a substrate; a heater layer configured to generate heat when supplied with energy, the heater layer provided on the substrate at a first outer surface of the heater assembly; one or more capillary tubes extending from a second outer surface of the heater assembly through the heater layer provided on the first outer surface of the heater assembly, the one or more capillary tubes for supplying aerosol-generating material to the heater layer for vaporisation, the second outer surface substantially opposite the first outer surface; and one or more distribution channels extending from a third outer surface of the substrate to at least one capillary tube for supplying aerosol-generating material to the one or more capillary tubes. The third outer surface is a side surface of the heater assembly, the side surface sharing an edge with at least one of the first outer surface and the second outer surface, and wherein the distance from the centre of the third outer surface to the centre of the heater assembly is shorter than a distance between the centre of any other side surface of the heater assembly to the centre of the heater assembly. Also described is an aerosol provision system, and a method for manufacturing a heater assembly.

(54) Invention Title: APPARATUSES AND PROCESSES FOR PRODUCING OPTICAL EFFECTS LAYERS

(57) Abstract

The invention relates to the field of the protection of security documents such as for example banknotes and identity documents against counterfeit and illegal reproduction. In particular, the present invention provides apparatuses and processes for producing optical effect layers (OELs) comprising magnetically oriented, said optical effect layers (OELs) exhibiting not only a dynamic movement but also an eye-catching relief and/or 3D effect upon tilting and may be as anti-counterfeit means on security documents or security articles or for decorative purposes.

(54) Invention Title: METHOD AND APPARATUS FOR POWER CONTROL OFFSET SCALING FOR COHERENT JOINT TRANSMISSION.

(57) Abstract

In accordance with an exampleembodiment of the present invention, provided are methods, apparatuses and computer program products configured at least to: select an integer number N0 of channel state information reference signal (CSI-RS) resources out of an integer number of NTRP network configured CSI-RS resources to a resource set associated with a CSI report configuration, wherein N < NTRP; determine a scaling factor for the resource set; determine at least one CSI component, based at least in part on an assumption that a ratio of a transmitted energy per resource element (EPRE) of a PDSCH signal and a transmitted EPRE of the nth CSI-RS resource is equal to the scaling factor times a power control offset configured for the nth CSI-RS resource of the resource set, wherein n ∈ ; and transmit a CSI report to a network comprising the determined at least one CSI component.

(51) INT. CL. : B21F 45/18

(54) Invention Title: FASTENER STRINGER AND METHOD OF COLLECTING FASTENER ELEMENT

(57) Abstract

Fastener tape (3,3') includes one or more water-soluble threads (6). The fastener tape (3,3') is dividable at least into a first tape portion (3a) including a first side-edge portion (31,31') and a second tape portion (3b) including a second side-edge portion (32,32') as the one or more water-soluble threads (6) dissolve.

(51) INT. CL. : A61K 39/42

(54) Invention Title: METHOD FOR MANUFACTURING VIRAL VACCINES AND COMPOSITIONS THEREOF

(57) Abstract

Present invention provides a method of producing clarified virus pool of virus to obtain a lyophilized/freeze-dried live attenuated virus immunogenic composition/ formulation comprising atleast one or more than one antigens/immunogens. Present invention provides a method of producing a clarified virus pool of viruses such as measles, mumps, rubella. It provides the improved large scale affordable /safe manufacturing processes (encompassing cultivation, purification & formulation stages) that utilize minimum animal origin components, provide high virus yield, ensure virus integrity/stability preservation across manufacturing & storage.

(51) INT. CL. : F16D 66/02

(54) Invention Title: A Yarn Inserting Device for Automatic Piecing Units

(57) Abstract

The present utility model discloses a yarn inserting device for automatic piecing units, belongs to the field of textile equipment. The yarn inserting device comprises: a base plate; an actuator and a holding arm that are arranged on the base plate; a linear guide assembly that is arranged on the base plate; the linear guide assembly is connected to the base plate and drives the base plate for linear movement, besides, the linear guide assembly is also connected to the device through a connecting plate. The yarn inserting device designed in the present application can ensure the movement of the holding arm in the horizontal plane. There is no overhanging length in the vertical plane, ensuring the stability of the holding arm in the movement process. Therefore, this enables a ring spinning machine to quickly and accurately piece a broken yarn together when yarn breakage occurs through the present device, thus improving the piecing efficiency of the automatic piecing unit.

(51) INT. CL. : C05C 9/02

(54) Invention Title: METHOD FOR GRANULATING UREA AND UREA GRANULATION APPARATUS

(57) Abstract

The present invention provides a method for prilling urea whereby urea particles of stable quality are obtained. The present invention relates to a method for prilling urea using a urea prilling tower including an exhaust port provided at a tower top, a spraying portion for molten urea, a plurality of atmosphere inlet ports and a collection portion for prilled urea particles. The urea prilling tower is configured such that the spraying portion for molten urea is disposed on an upper side of the urea prilling tower, the plurality of atmosphere inlet ports are disposed on a lower side of the urea prilling tower, the collection portion is disposed at a tower bottom on a further lower side of the atmosphere inlet ports, and the plurality of atmosphere inlet ports are disposed at intervals in a circumferential direction. In the method for prilling urea of the present invention, in a process of spraying the molten urea in an interior of the urea prilling tower and taking in an atmosphere at an ambient temperature of the urea prilling tower through the atmosphere inlet ports upwardly from below to cool and solidify the molten urea to form the urea particles, heating air at a temperature higher than the ambient temperature is supplied in addition to the atmosphere at the ambient temperature to heat the interior of the urea prilling tower.

(54) Invention Title: METHOD, APPARATUS AND COMPUTER PROGRAM

(57) Abstract

There is provided an apparatus. The apparatus comprises:means for obtaining information of one or more non-active periods of a cell that is in discontinuous transmission;means for receiving at least one resource allocation for the apparatus;means for determining one or more resources of the at least one resource allocation that overlap fully or in part with the one or more non-active periods of the cell; andmeans for configuring a hybrid automatic repeat request acknowledgement codebook based at least in part on the determining one or more resources of the at least one resource allocation that overlap fully or in part with the one or more non-active periods of the cell.

(51) INT. CL. : H04L 65/1016

(54) Invention Title: Internet Protocol Multimedia Subsystem node, Packet Switched Core Network nodeand methods in a wireless communications network

(57) Abstract

Amethod performed by an Internet Protocol Multimedia Subsystem (IMS) node is provided. The method is for handling a failure of setting up voice Quality of Service, QoS, resources relating to an incoming voice call to a User Equipment (UE) in a wireless communications network. The wireless communications network supports a Packet Switched (PS) access domain. The IMS node sends (201) a first request to a PS Core Network (CN) node. The first request will trigger the PS CN node to setup of the voice QoS resources via the PS access domain. The IMS node receives (202) a first indication from the PS CN node. The first indication is indicating a first failure of setting up the voice QoS resources via the PS access domain according to the first request. The which first failure is a temporary failure. The IMS node sends (203) a second request to the PS CN node. The second request will retrigger the PS CN node to again setup the voice QoS bearer via the PS access domain. The IMS node receives a second indication from the PS CN node. The second indication is indicating any one out of: (i) a second failure with a cause, or (ii) a success, of setting up the voice QoS resources via the PS access domain, retriggered according to the second request.
